

AYUSH CHANDRAKAR

Mining Engineer | Underground Coal Mining | Mine Operations | Mining Digitalization
Bilaspur, CG | +91-93991-90074 | ayushchandrakar1111@gmail.com | [linkedin.com/in/ayushchandrakar](https://www.linkedin.com/in/ayushchandrakar) | [ayush-083.github.io/portfolio](https://github.com/ayush-083)

PROFESSIONAL SUMMARY

Mining Engineer with 15 months of hands-on experience across underground coal mine operations and mining technology deployment. Achieved a 15% improvement in coal extraction efficiency at a SECL underground mine and contributed to a 20% productivity uplift for a Coal India client through field implementation of digital fleet-tracking systems. Holds Second Class Manager's Certificate (CMR 2017), DGMS Gas Testing Certificate, and First Aid Certificate.

SKILLS

Mining Operations: Underground Mining, Bord & Pillar Method, Mine Planning & Design, Ventilation Management, Drilling & Blasting, Geotechnical Analysis, Continuous Miner Operations, DGMS Compliance, CMR 2017

Mining Technology: Fleet Tracking & Telematics, Remote Site Monitoring, Mining Software Deployment, Operational Data Analysis, MIS Reporting, Productivity & Delay Analysis, Client Pain Point Identification, Relationship Management

Management: Site Operations Management, Shift Management, Safety & Risk Assessment, DGMS Safety Compliance, Emergency Response & Incident Management, Cross-Functional Coordination, Project Management, Team Development, Resource Management, Client Training & Onboarding

EXPERIENCE

Post-Graduate Practical Training

Jul 2024 – Jul 2025

South Eastern Coalfields Limited (SECL), Coal India | Kurja UG Mine, Bijuri, Madhya Pradesh

- Analyzed and optimized the Bord and Pillar method, focusing on its cyclic operation to maximize efficiency in coal extraction, resulting in a 15% increase in efficiency.
- Evaluated the operational cycle of continuous miners, focusing on cutting, loading, and haulage to identify and implement productivity improvements.

Operations Executive – Mining Site Operations

Jan 2026 – Apr 2026

KiarX (Mining Digitalization & Fleet Technology) | Ahmedabad, Gujarat

- Generated daily and weekly MIS reports on machine utilization, idle time, shift output, and driver behavior; identified recurring operational delays averaging 2–3 per site per week and coordinated resolution with field staff and technical support.
- Led end-to-end technology implementation at BKT Minetech Pvt. Ltd. (CCL Govindpur) — commissioned hardware across the mine fleet and set up the software platform from scratch within a 3-month window.
- Trained 10+ mine operators and supervisors on system operation; presented a data-backed productivity analysis demonstrating a 20% potential increase in daily mine output through improved fleet utilization.

PROJECTS

KiarX Fleet Technology Deployment – BKT Minetech Pvt. Ltd., CCL Govindpur

Jan – Apr 2026

- Conducted pre-deployment site survey, designed device placement plan, and executed hardware installation across all tracked mine vehicles — completed full system go-live within the project timeline.
- Built data validation protocols achieving 100% data accuracy; developed a site-specific productivity model demonstrating a 20% gain in daily coal output and replaced manual reporting with automated daily MIS.

Improving Availability & Utilization of SDL in Indian Coal Mines

Mar – May 2023

- Studied SDL breakdown patterns across multiple Indian coal mines and designed a Proactive Maintenance System with structured spare parts inventory and personnel deployment to reduce unplanned downtime.
- Created an SDL working-hours tracking model to schedule preventive maintenance and enable root-cause analysis of recurring failures — framework estimated to reduce unplanned downtime by 25–30%.
- Recommended Condition-Based Maintenance (CBM) and data analytics integration as a scalable solution for SDL fleet management in Indian underground coal mines.

Utilization & Safety Aspects of Underground Mine Methods in Indian Coal Mines

Feb – Mar 2022

- Compared productivity and safety records across Bord & Pillar and Longwall mining methods, identifying adoption barriers to mass production technologies in the Indian coal sector.
- Assessed how CBM integration and optimized ventilation management could simultaneously reduce accident rates and improve extraction output — findings aligned with DGMS best-practice guidelines.

EDUCATION

B.Tech – Mining Engineering

Graduated: 2023

Rungta College of Engineering & Technology, Bhilai | CGPA: 8.12 / 10

CERTIFICATIONS

- Second Class Manager's Certificate (Unrestricted) – CMR 2017 (Coal Mines Regulations)
- Gas Testing Certificate – Issued by Directorate General of Mines Safety (DGMS)
- First Aid Certificate – Certified First Aider
